

Subject: Custom bike shelters create sustainable style...

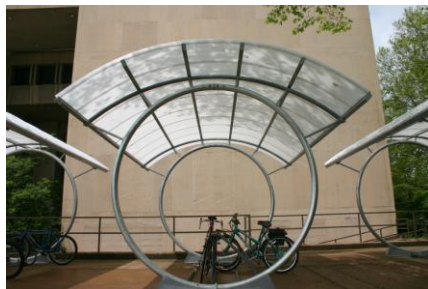

...that makes a unique statement about your community.

## ***Hello!***

Not long ago, bike shelters were utilitarian. Bland, boring structures that served one purpose: something to latch a bike to.

Today, bike shelters are viewed as a community's commitment to a more sustainable environment...an encouragement for alternative transportation...an opportunity to make your city stand out.

Our designers and engineers can help you make the most of that opportunity with custom bike shelters.

We engineer your shelters for your area's code and fire test requirements, for your climate's wind and snow loads, for your community's desire to go green with LEED points.

Choose your materials in translucent polycarbonate, glass, metal, acrylic or combination. These vandal-resistant shelters are modular for easy expansion. You can incorporate options for bike racks, lean rails, perch seating, solar LEDs/PVs, insulated light-transmitting panels filled with Nanogel® and exciting new 3S Solar Block coatings to reduce heat loads.

And at the American Public Transportation Association conference in October 2008, Duo-Gard introduced a new roof concept featuring color-changing acrylic for design versatility. It's shown above on the right.

Whether you want architectural appeal or standard accommodation, we can help. Take advantage of our 25 years of shelter innovation. Call us at 800-872-4404. We're eager to show you how we'll collaborate with you to create bike shelters you and your community can be proud of.

Sincerely,

*David Miller*
