Subject: New glazing panel means changes....

Hello!

What would you design with a glazing panel that changes color as the light or the viewer moves?

Think about dazzling exterior facades. High-profile interior walls. Unique partitions. Statement signage. Contemporary canopies.

Better yet, you tell us. We developed our new Dichroic Translucent Panel to help you achieve dynamic, dramatic designs for all types of settings as you maintain high diffuse light transmission to gain daylighting benefits.

Above is the same panel, viewed from two different angles.

Twin translucent polycarbonate sheets encase special light-reflecting, light-transmitting materials to create diffuse daylighting strategies with design versatility and sustainable performance.

Panels are custom-engineered to your specifications.

We'll be introducing this new panel at Greenbuild, but we wanted you to know now.

If you have a project that calls for something special, call us at 800-872-4404 to talk about what the new Dichroic Translucent Panel can add.

'Til next month,

David Miller, President
Duo-Gard Industries Inc.
