

Duo-Gard Industries has created a translucent sliding door system that incorporates 40mm polycarbonate structured sheet available for interior design ideas. The system provides architects and interior designers with a light weight, translucent door applications ranging from warehouse redesign to creating movable office wall solutions.

- Fully fabricated prior to shipping.
- Complete system includes attachment hardware that can accommodate most existing conditions.
- Solid polycarbonate framing material at a fraction of the weight aluminum or steel systems.
- Panel thickness is a robust 40mm (1.5 inches) made of light weight polycarbonate structured sheets.
- Fully engineered services available.
- Accommodates any door height with unlimited width options.
- 100% made in the USA.
- Translucent panels provide a means for natural daylight to penetrate deeper into the partitioned area.
